

Why did I choose this plug in?

When finding what the assignment was and one of the last to choose a library or plugin I went out and searched. I came across a website with the latest JavaScript Plugins. I looked at the first one which was the Sliding panels and I choose it because I thought it was very unique and I never seen anything like it. I like it so much I bookmarked the site to use for my future portfolio site. I also really liked how they coded it. It was very clean and I also learned some stuff. Some of it was very confusing as well so I did have a hard time figuring how I could edit the plugin. Finally, I figured it out and but it was still a bit confusing not know if I did it fully right or not.

When looking at the code I had a hard time understanding the JavaScript because I could not figure out what I needed to change to get it working the way I wanted it. Then I started looking at the CSS and Html and messing around trying to figure out what does what. Until I started seeing and learning what I needed to change. Took me a while but I finally got it and finally made it do what I wanted to do which was adding or subtracting panels from the plugin.

I tried to see if I could change the JavaScript because I knew it what needed to be worked on but the plugin I believe was really made for to be edited in the css or html. I hope it was still ok using the plug for an example.

Thanks very much.
