

Ok this final project website is for a fictional company called DEVTECH which will be my future business name for my Web development company.

Ok in my assignment I first created the homepage. I added a navigation menu with my logo on it. I also added a interactive slider image gallery with 3 pictures that slides over every 3 seconds. I also integrated a jquery effect to slide the navigation menu and image slider to hide it and unhide it. Underneath the image slider when it hides I added my logo much bigger with a z-index of -1. I also added a bar chart of SEO Prices and how much visitors the customer can get with the amount of work been done using googles bar chart plugin. After the bar chart I added a world map integration using lyndas.com technique. The world map consists of Devtech server locations around the world. I also added a music player with a creative commons song playing it. With the audio player I also added a jquery function to fade the audio player in and out. I checked all browsers and noticed all my plugins were working so I did not need to use modernizer. I also had a hard time how to use modernizer since I did not have any canvas functions and it's the way I learned how to use modernizer. So the last thing I want to point out is that I've had a very hard time in the past visualizing how I want my site to look. I'm very not good at designing from scratch but I still can develop and design a site if it were told how they wanted by a client or a full sail instructor. I just wanted to point that out because it might not look professional enough.
